

Issues

- Tax evasion
- Vehicle theft
- Document forgery
- Lost revenue

Authentisec™ SVR (Secure Vehicle Registration) was developed to address the growing issue of fraudulent vehicle identification and document management. Throughout the world there are millions of private and commercial vehicles that are being driven illegally as a result of deficient document management. SVR now alleviates these issues by delivering a secure vehicle tagging system that locks the identity of the car and driver with MOT, Tax and Insurance details.

Benefits

- Minimised Tax and License evasion
- Combat vehicle theft
- Increased compliance
- Secure non reputable identity

Car, driver and document details are held on programmable RFID tag which may be placed either in the window or safe location within the vehicle. The content is stored in a highly secure format and cannot be read or duplicated fraudulently. This method of “Tag” encryption is unique to First Ondemand.

Authentisec™ SVR assures registration compliance ensuring that vehicle owners adhere to local and regional laws.

The Authentisec™ SVR environment has been designed to be easily integrated into current business processes and any current IT infrastructures. SVR comes with a template development environment, written in Java, that allows green field and custom deployment where little integration is required.

Authentisec™ SVR

Authentisec™ SVR's core functionality is based on three key areas:

Static data

- Name
- Vehicle Type
- Registration Number
- VIN / Chassis Number
- Colour
- Year of Manufacture
- Photographic Identity of vehicle

Variable data

Motor Taxation date and issuing authority

Vehicle insurance

Insuring company

Policy effective Date

Policy expiry date

Policy number

Types of insurance cover (3rd party, fire and theft)

Penalty / Payment data

- Traffic violations
- Outstanding fines not paid by driver
- Parking violations
- Outstanding unpaid penalties
- Congestion charging
- Toll road charges

The data may be read from the RFID tag utilising Portable hand held field devices and long range gantry systems at automated check points.
